In digital watermarking, an identification code (symbol) is embedded permanently inside a cover image which remains within that cover invisibly even after decryption process. The aim of watermarking is to include hidden information (i.e., imperceptible) in a multimedia document to ensure a security service or simply a labelling application.

Digital watermarking is the procedure of embedding information (i.e., a watermark) into the host object in such a way that the watermark image/data can be detected by authorized individuals, for assertion of authenticity purposes. The host signal can be a video, audio, image, 3D mesh, etc., while the watermark can be a logo, image, serial number, owner's ID, name, or any other information which shows ownership of the host signal.
