Hyundai and Kia Motors: The Early Years and Product Development by Donald G Southerton provides deep insights into the rise of the Korean car industry. From the 1960s to early 2000s, political and economic forces impacted the growth and development of the South Korean carmakers, including Hyundai and Kia Motors. In addition, the brands at times partnered for technology with Ford, Mazda, and Mitsubishi, along with world class designers like Giorgetto Giugiaro. Expanding rapidly the Korean brands soon looked to new international markets, including the U.S. Despite the failure of Kia Motors to survive the IMF Crisis, the merger with Hyundai led to integrated technology research, development, and manufacturing-- not to mention the economies of scale needed for the Korean automaker to compete globally with industry heavyweights such as Toyota, Ford, GM, and VW. Car models discussed including the Kia's Brisa, Pride, Sephia, Sportage, and Rio along with Hyundai's Pony, Excel and Santa Fe.

Each chapter begins with an opening case vignette (from countries around the world) and concludes with a list of key terms and in-depth exercises (Global Manager's Workbook). The text also provides country ratings for 50 countries on economic activity, political risk, and cultural differences, as well as a 35 item instrument for students to measure their own cultural awareness

A full scale examination of the 1979 Sino-Vietnamese War - the events that led to it, the Cold War aftermath, and the implications for the region and beyond.

In large cities in developed countries, the share of manufacturing has declined drastically in the last decades and the share of service has grown as many manufacturing firms have closed or moved to lower-cost locations. The process of deindustrialization is often seen as part of the inevitable shift towards a knowledge based economy and urban economies come to rely on research and development, financial services, tourism and the creative industries. This book looks at the changing link between manufacturing and knowledge-based activities in urban regions. The authors develop a new framework drawing on insights from organization studies and regional economic literature looking at various international case studies in Western and Eastern Europe, South America and Asia.

Russian businesses in the post-Soviet period have been noted for their unusual, sometimes allegedly corrupt, business practices, and for their role in the enrichment of oligarchs. This book, which includes a wide range of case study examples, and which draws on the author's first-hand experience of running a Russian company, argues that a key to understanding contemporary Russian business is the importance of arbitrage, that is the ability to take advantage of price and cost differentials in different markets. The book argues that the conditions for such arbitrage advantages are often created by businesses which have special links to particular institutions; that arbitrage benefits are not available to all businesses in a sector, thereby providing unfair competitive advantages to some businesses; and that businesses' overall activities are often distorted by this system. The book includes an analysis of a wide range of different types of arbitrage activities in action.
