Baseband Unit

Techopedia explains

Baseband Unit (BBU)

The baseband unit

transmits a signal at its

original frequency

without modulation.

This is a common part

of telecom systems that

deliver signals through

complex trajectories.

The baseband unit

commonly runs data to an RF system, as part of a wireless model. In terms of practical design, engineers typically place baseband units in an equipment room and design it to streamline communication through the physical interface.
