I am currently reading Cormen's famous Introduction to Algorithms book. However, I do not have a resource where I can verify my solutions to the exercises. I've tried to find something on Google, but everything I find is for the 2nd edition whereas I have the 3rd. Some problems are similar, but some aren't. I'd like to have a solutions manual for this specific book.

Welcome to my page of solutions to "Introduction to Algorithms" by Cormen, Leiserson, Rivest, and Stein. It was typeset using the LaTeX language, with most diagrams done using Tikz. It is nearly complete (and over 500 pages total!!), there were a few problems that proved some combination of more difficult and less interesting on the initial pass, so they are not yet completed. The problems ...

Next we see that the fifth element (here a 41) needs to be at the third or fourth location so we shift the 59 one to the right to get 26,31,41,41,59,58. Finally inserting the 58 into its correct position in the array gives 26,31,41,41,58,59. Exercise 2.1-2 To change the INSERTION-SORT routine to sort the numbers in decreasing order we ...
