This book provides an overview of the current state of research on development and application of methods, algorithms, tools and systems associated with the studies on man-

machine interaction. Modern machines and computer systems are designed not only to process information, but also to work in dynamic environment, supporting or even replacing human activities in areas such as business, industry, medicine or military. The interdisciplinary field of research on man-machine interactions focuses on broad range of aspects related to the ways in which human make or use computational artifacts, systems and infrastructure. This monograph is the fourth edition in the series and presents new concepts concerning analysis, design and evaluation of man-machine systems. The selection of high-quality, original papers covers a wide scope of research topics focused on the main problems and challenges encountered within rapidly evolving new forms of human-machine relationships. The presented material is structured into following sections: human-computer interfaces, robot, control, embedded and navigation systems, bio-data analysis and mining, biomedical signal processing, image and motion data processing, decision support and expert systems, pattern recognition, fuzzy systems, algorithms and optimisation, computer networks and mobile technologies, and data management systems.

The book focuses on original approaches intended to support the development of biologically inspired cognitive architectures. It bridges together different disciplines, from classical artificial intelligence to linguistics, from neuro- and social sciences to design and creativity, among others. The chapters, based on contributions presented at the Eleventh Annual Meeting of the BICA Society, held on November 10-14, 2020, in Natal, Brazil, discuss emerging methods, theories and ideas towards the realization of general-purpose humanlike artificial intelligence or fostering a better understanding of the ways the human mind works. All in all, the book

provides engineers, mathematicians, psychologists, computer scientists and other experts with a timely snapshot of recent research and a source of inspiration for future developments in the broadly intended areas of artificial intelligence and biological inspiration.

Il volume 32.1 è suddiviso in due parti. La prima comprende gli articoli proposti annualmente alla rivista da studiosi italiani e stranieri che illustrano ricerche archeologiche interdisciplinari in cui l'uso delle tecnologie informatiche risulta determinante per l'acquisizione, l'elaborazione e l'interpretazione dei dati. Tecniche di analisi statistica, banche dati, GIS e analisi spaziali, tecniche di rilievo tridimensionale e ricostruzioni virtuali, sistemi multimediali, contribuiscono a documentare le testimonianze del passato e a diffondere i risultati della ricerca scientifica. La seconda parte del volume contiene un inserto speciale curato da Angela Bellia e dedicato a una tematica innovativa, l'archeomusicologia, un campo di ricerca multidisciplinare che adotta i metodi dell'archeologia per lo studio della musica e della vita musicale nel mondo antico. Gli articoli s'incentrano sul ruolo delle tecnologie digitali basate sulla modellazione 3D e sulla simulazione del suono per ampliare le conoscenze sugli strumenti musicali dell'antichità e sul prezioso, ma estremamente labile, patrimonio sonoro. Chiude il volume la sezione dedicata alle Note e recensioni.

Executive cognitive functions like working memory determine the success or failure of a wide variety of different cognitive tasks, such as problem solving, navigation, or planning. Estimation of constructs like working memory load or memory capacity from neurophysiological or psychophysiological signals would enable adaptive systems to respond to cognitive states

experienced by an operator and trigger responses designed to support task performance (e.g. by simplifying the exercises of a tutor system when the subject is overloaded, or by shutting down distractions from the mobile phone). The determination of cognitive states like working memory load is also useful for automated testing/assessment or for usability evaluation. While there exists a large body of research work on neural and physiological correlates of cognitive functions like working memory activity, fewer publications deal with the application of this research with respect to single-trial detection and real-time estimation of cognitive functions in complex, realistic scenarios. Single-trial classifiers based on brain activity measurements such as electroencephalography, functional near-infrared spectroscopy, physiological signals or eye tracking have the potential to classify affective or cognitive states based upon short segments of data. For this purpose, signal processing and machine learning techniques need to be developed and transferred to real-world user interfaces. The goal of this Frontiers Research Topic was to advance the State-of-the-Art in signal-based modeling of cognitive processes. We were especially interested in research towards more complex and realistic study designs, for example collecting data in the wild or investigating the interaction between different cognitive processes or signal modalities. Bringing together many contributions in one format allowed us to look at the state of convergence or diversity regarding concepts, methods, and paradigms.

This book is written in a friendly manner written by an expert with numerous years of practical experience utilizing SolarWinds Orion NPM as a network monitoring solution. This book is for systems administrators, system analysts, and systems engineers who are tasked with installing and implementing a network performance monitor. Knowledge of basic network concepts is

This book investigates formal characteristics and discourse functions of linguistic creativity at the level of idioms in spoken ELF as represented in the Vienna-Oxford International Corpus of English (VOICE). Building on the findings of previous ELF research, the book proposes that creativity might serve as a fundamental concept in accounting for the variation that seems to be central to describing and understanding English as a lingua franca.

Zwei Bauvorschläge zeigen, wie man aus PC-Komponenten einen Linux-Heimserver konfiguriert und mit Ubuntu einrichtet. Auch die Handhabung von Secure Boot und der Einsatz von Linux auf einem modernen Ultrabook sind Themen. Ferner zeigen wir einige pfiffige Basteleien mit den Raspberry Pi. Weitere Themen sind Ubuntu 16.10, Raspi-Bauvorschläge, neue Paketformate Flatpak und Snap, Google Drive nutzen, Backup-Programme, Bildbearbeitung mit ImageMagick und zahlreiche Kurzvorstellungen neuer Linux-Software.

Noel Pearson's seminal *Our Right to Take Responsibility* is a searing, clear-eyed analysis of the disastrous effects of long-term welfare dependency on Aboriginal society. Both highly original and deeply contentious, it fundamentally changed the discourse as well as the direction of Indigenous affairs policy, and has joined the canon of Australian social and political writing. This reissued edition celebrates the twentieth anniversary of this essential work. Containing an incisive new introduction from the author, it highlights how little has changed and how far we still have to go.
