developments have occurred in the field of hindered phenols and hindered amines, followed by phosphorus antioxidants and UV absorbers. Effects of molecular weight of stabilizers on performance as well as possible applications of high molecular weight stabilizers are discussed, as there seems to exist a tendency towards increase in molecular weight of stabilizers.

A complementary and ultimately more important objective is to accommodate these practical developments within the framework of antioxidant theory, since there can be little question that further major advances in the practice of stabilisation technology will only be possible on the basis of a firm mechanistic foundation.
