Tooth - Tooth - Diseases of teeth and gums: Caries, or tooth decay, is the most common disease of the teeth among humans. Apart from the common cold, it is perhaps the most frequent disease in contemporary society. Tooth decay originates in the buildup of a yellowish film called plaque on teeth, which tends to harbour bacteria.

Tooth - Diseases of teeth and gums | Britannica

Plaque is a sticky substance that contains bacteria. Some bacteria in plaque are harmless, but some are harmful for the health of your gums. If you don't remove plaque from your teeth by brushing them, it builds up and irritates your gums. This can lead to redness with bleeding, swelling and soreness.

Gum disease - Illnesses & conditions | NHS inform

Periodontal (gum) disease is an infection of the tissues that hold your teeth in place. It's typically caused by poor brushing and flossing habits that allow plaque—a sticky film of bacteria—to build up on the teeth and harden. In advanced stages, periodontal disease can lead to sore, bleeding gums; painful chewing problems; and even tooth loss.

Gum (Periodontal) Disease Causes, Symptoms, Diagnosis ...

Gum disease is a very common condition where the gums become swollen, sore or infected. Most adults in the UK have gum disease to some degree, and most people experience it at least once. It's much less common in children. If you have gum disease, your gums may bleed when you brush your teeth and you may have bad breath. This early stage of gum disease is known as gingivitis.

Gum disease - NHS

Gum disease is an infection of the tissues that support the teeth. It's mainly caused by bacteria from plaque build-up. In some people who are susceptible to gum disease, the body over-reacts to the bacteria around the gums and causes too much inflammation. In others, the inflammation doesn't clear up properly.

The health risks of gum disease - NHS

Foods with hidden sugars include: condiments such as ketchup and barbecue sauce. sliced fruit or applesauce in cans or jars that have added sugars. flavored yogurt. pasta sauce. sweetened iced tea. soda. sports drinks. juice or juice blends. granola and cereal bars. muffins.

Oral Health Basics: Symptoms, Types, Causes & More

Gingivitis is the mildest type of periodontal disease and usually represents the first stage of gum disease. Most common symptoms include red, tender or /and swollen gums that may tend to bleed easily when brushing or flossing teeth. Gingivitis is not associated with loss of gum attachment from teeth or with bone loss.

Types of Gum Disease - Dental Diseases

Gum disease, also known as periodontal disease, is an infection of the gums surrounding the teeth. It is also one of the main causes of tooth loss among adults. Some studies have indicated that there may be a link between heart disease and periodontal disease. 3 Everyone is at risk for gum disease, but it usually occurs after age 30.

Mouth Disorders | Common Mouth Problems | MedlinePlus

Several dental diseases can cause oral health problems affecting the teeth, gums, or other tissues and parts of the mouth. They may range in severity from a simple mouth ulcer to a common tooth cavity, or up to a deadly mouth cancer. Dental diseases may cause pain and compromise our ability to chew, smile, or speak properly.

Dental Health Problems - Dental Diseases & Teeth Problems

Gingivitis: this is the earliest stage of gum disease, an inflammation of the gums caused by plaque buildup at the gumline. If daily brushing and flossing do not remove the plaque, it produces toxins (poisons) that can irritate the gum tissue, causing gingivitis. You may notice some bleeding during brushing and flossing.

What Are The Stages Of Gum Disease? - Colgate

Gingivitis develops when plaque that contains bacteria slowly backs up on your teeth and gums. Given time, the toxins released by the built-up plaque begins to damage your teeth and gums, making them sensitive, irritated and puffy. Prolonging gingivitis can lead to much more serious conditions.
