After caring for his mother at the end of her life, Thomas Gass took a job as a nursing home aide in a for-profit long term care home. This graphic, poignant & chilling book details his experiences in this 'warehouse' for the elderly & asks fundamental questions about care in American nursing homes.

THE DEFINITIVE TEXT ON THE PRINCIPLES AND CLINICAL PRACTICE OF NURSING HOME CARE Nursing Home Care is a practical textbook designed to serve as a rich evidence-based resource to provide physicians and other practitioners with the information and knowledge to advance nursing home care. It states and explains the principles underpinning safe, personalized, and dignified nursing home practice using an integrated, cooperative approach. In addition, it provides the medical knowledge necessary to give quality care to nursing home residents. Nursing Home Care reflects the International Association for Geriatrics and Gerontology's conviction that nursing home practice is an interdisciplinary endeavor that requires a sound theoretical, scientific, and values base in addition to clinical expertise. Mindful of the influences of different culture and context, the premise of this text is that there is a shared and common knowledge base to guide nursing home practice and approaches to caring that are universal. THIS UNIQUE TEXT IS LOGICALLY DIVIDED INTO FOUR PARTS: PART 1 covers the origins of the nursing home movement, plus alternative approaches, including aging in place and what older people are saying about nursing home life and culture change. PART 2 focuses on the fundamentals of working as part of a nursing home team providing day-to-day care and the leadership essentials to drive the quality improvement agenda. PART 3 addresses the most common conditions experienced by older nursing home residents. PART 4 is devoted to clinical and nursing aspects of specific disease management. KEY FEATURES: Online supplemental material, including 1,000 PowerPoint slides available to faculty, plus Q&A available from the IAGGI * Over 150 multiple choice questions * Key points for each chapter * An essential study guide for the IAGG certificate in nursing home care

Long-term care in the United States has taken the nursing home as its benchmark, but the monetary, social, and psychological costs of nursing home care are all too high. This book challenges the current dominance of nursing homes as the principal institution of long-term care. It offers a series of alternative models where both services and housing can be provided in a way that allows long-term consumers to enjoy dignified, "normal" lifestyles. It addresses the political and economic consequences of making this decision. The authors start with the premise that long-term care is designed to assist people who lack the capacity to function fully independently. They argue that no disabled person of any age should be required to forsake his/her humanity in exchange for care. The book rejects the artificial dichotomy between social and medical care, asserting that both play important roles in psychological and physical well-being of long-term care patients. The authors consider the need for competent and compassionate medicine and discuss the methods for improving both its coordination of care and its effectiveness. The book redefines the meaning of safety and protection in long-term care, and how this goal can be accomplished without sacrificing quality of living. As the new millennium and the aging of baby boomers approaches, more creative approaches to providing better long-term care are required. This volume outlines a useful framework for the provision of effective and humane community-based programs that are both feasible and affordable. It will be an invaluable guide for geriatricians, public health professionals, family physicians, nurses and others who care for elderly patients.

As the baby-boomer generation ages, nursing home care is likely to become a major social problem. New residents will put huge strains on already short staffing at a time when funding to government-assisted homes (75 percent of all nursing homes) is lower than ever.Based on her ten years of experience working as a Licensed Practical Nurse in many care facilities, attorney Donna M. Reed shares her insider knowledge to help ensure that nursing home residents receive the best care possible. Reed focuses on the following key points:•The legal requirements of nursing homes regarding delivery of care?The ways in which many nursing homes regularly break these laws?Detailed descriptions of how the typical nursing home operates?The responsibilities of each nursing home employee?Nursing home inspections?Residents' rights?How to avoid substandard care?What actions to take to improve nursing home lifeReed's firsthand knowledge of nursing home care and her in-depth understanding of the legal requirements that protect residents offer invaluable information to readers concerned about a loved one in a nursing home.Donna M. Reed worked as a nursing assistant and Licensed Practical Nurse in numerous nursing homes in California and New England. She is now an attorney and lives in North Carolina.

As more people live longer, the need for quality long-term care for the elderly will increase dramatically. This volume examines the current system of nursing home regulations, and proposes an overhaul to better provide for those confined to such facilities. It determines the need for regulations, and concludes that the present regulatory system is inadequate, stating that what is needed is not more regulation, but better regulation. This long-anticipated study provides a wealth of useful background information, in-depth study, and discussion for nursing home administrators, students, and teachers in the health care field; professionals involved in caring for the elderly; and geriatric specialists.

Among the issues confronting America is long-term care for frail, older persons and others with chronic conditions and functional limitations that limit their ability to care for themselves. Improving the Quality of Long-Term Care takes a comprehensive look at the quality of care and quality of life in long-term care, including nursing homes, home health agencies, residential care facilities, family members and a variety of others. This book describes the current state of long-term care, identifying problem areas and offering recommendations for federal and state policymakers. Who uses long-term care? How have the characteristics of this population changed over time? What paths do people follow in long term care? The committee provides the latest information on these and other key questions. This book explores strengths and limitations of available data and research literature especially for settings other than nursing homes, on methods to measure, oversee, and improve the quality of long-term care. The committee makes recommendations on setting and enforcing standards of care, strengthening the caregiving workforce, reimbursement issues, and expanding the knowledge base to guide organizational and individual caregivers in improving the quality of care.

Almost a decade ago, Peter S. Silin wrote Nursing Homes: The Family's Journey to provide family members with practical advice and emotional support. This successor volume incorporates the new and sometimes baffling world of assisted living. Nursing Homes and Assisted Living focuses on the psychological, emotional, and practical aspects of helping family members and seniors make a difficult transition. Silin approaches his subject with compassion and sensitivity, guiding readers through the process of finding the best possible care. He describes how nursing homes and assisted living facilities work and outlines the selection process; he explains how to prepare for the day a relative moves into a facility and suggests ways to help the resident settle in; he focuses on the family member's role in solving problems, obtaining good-quality care, and visiting. The author's insights help caregivers cope with difficult decisions and deal with emotional issues such as guilt and grief, while celebrating the tender, rewarding aspects of being a caregiver. Vignettes from real-life caregivers narrating their experiences amplify Siliin's advice and will resonate with families. This book provides caregivers, family members, and seniors with the information they need to effect successful transitions. It is also a valuable tool for social workers, nurses, and family therapists.

This first hand report on the work of nurses and other caregivers in a nursing home is set powerfully in the context of wider political, economic, and cultural forces that shape and constrain the quality of care for America's elderly. Diamond demonstrates in a compelling way the price that business-as-usual policies extract from the elderly as well as those whose work it is to care for them. In a society in which some two million people live in 16,000 nursing homes, with their numbers escalating daily, this thought-provoking work demands immediate and widespread attention. "[An] unnerving portrait of what it's like to work and live in a nursing home. . . . By giving voice to so many unheard residents and workers Diamond has performed an important service for us all."—Diane Cole, New York Newsday "With Making Gray Gold, Timothy Diamond describes the commodification of long-term care in the most vivid representation in a decade of round-the-clock institutional life. . . . A personal addition to the troublingly impersonal national debate over healthcare reform."—Madonna Harrington Meyer, Contemporary Sociology

Hospitals and nursing homes are responding to changes in the health care system by modifying staffing levels and the mix of nursing personnel. But do these changes endanger the quality of patient care? Do nursing staff suffer increased rates of injury, illness, or stress because of changing workplace demands? These questions are addressed in Nursing Staff in Hospitals and Nursing Homes, a thorough and authoritative look at today's health care system that also takes a long-term view of staffing needs for nursing as the nation moves into the next century. The committee draws fundamental conclusions about the evolving role of nurses in hospitals and nursing homes and presents recommendations about staffing decisions, nursing training, measurement of quality, reimbursement, and other areas. The volume also discusses work-related injuries, violence toward and abuse of nursing staffs, and stress among nursing personnel—and examines whether these problems are related to staffing levels. Included is a readable overview of the underlying trends in health care that have given rise to urgent questions about nurse staffing: population changes, budget pressures, and the introduction of new technologies. Nursing Staff in Hospitals and Nursing Homes provides a straightforward examination of complex and sensitive issues surround the role and value of nursing on our health care system.
