Complex pharmacologic information is simple to learn with this complete study resource! Designed to accompany Lehne's Pharmacology for Nursing Care, 9th Edition, this robust workbook features critical

thinking study questions, case studies, and patient teaching scenarios that help you connect pharmacology concepts with their impact on patient care. Plus, an emphasis on priority nursing care with NCLEX examination-style review questions prepares you for success on the exam. NCLEX Examination-style questions are included in each chapter. NEW! NCLEX-style alternate format questions including prioritization questions, bolster your readiness for the NCLEX Exam while supporting review of core pharmacology content NEW! Increased emphasis on patient safety features questions on safe patient care that challenge you to select appropriate actions to prevent or remediate medication errors. NEW! Detailed rationales for all prioritization questions are included in the answer key and encompass explanations for both correct and incorrect responses.

With its concise, straightforward approach, this text puts nursing pharmacology concepts and essential drug calculation skills into a contemporary nursing context to prepare you for real-world drug administration responsibilities. Revised and updated with the most current information-including Prototype Drug Charts, detailed Nursing Process summaries, and NCLEX Study Questions-this 7th edition makes pharmacology more understandable than ever.

This ideal starter text for student nurses in pharmacology is now into its 4th edition. It makes pharmacology less intimidating by focusing on the knowledge needed at pre-registration level in order to safely and competently practice as a newly qualified nurse. Praised for its helpful layout and jargon-free language, this updated edition introduces pharmacology in a friendly, informative way, without assuming previous knowledge or a level of confidence in numeracy. This new edition has been carefully expanded to include new chapters on cardiovascular pharmacology and chemotherapy in cancer nursing. There are more details on drugs used in chronic and long-term conditions applied to nursing competencies and standards. It incorporates the new 2018 NMC standards for nursing education and links to practice guidelines. Additional case scenarios have been added spanning all areas of practice and include adult, elderly care, child, mental health and learning disability applications. This allows nurses to apply their knowledge to a range of different people with varying and complex needs to enhance their application to practice. The book contains: • 120 calculations and 130 multiple choice questions to assist you in assessing your learning as you work through each chapter • Clinical tips boxes linking pharmacology to nursing practice • 50 person centred case scenarios across a range of practice settings • References to key standards and guidelines "The book also emphasises the application of the principles of pharmacology to all areas of practice and includes; drug action, drug interactions, side effects and adverse reactions. It is useful for all pre-registration students and those on post qualifying or continuing professional development courses where pharmacology is a component. Overall, this book is an excellent resource for healthcare students that will support their learning throughout their training and beyond. It covers fundamental concepts of how the major classes of medications exert their therapeutic effect, but also how side effects and adverse reactions can occur. Chapters on legal aspects of medication administration and drug calculations enhance this usefulness of this book – all of which are supported by example questions, calculations and clinical 'tips'. This book has been fully updated to reflect the 2018 NMC standards and as such provides a one-stop shop for any students studying safe administration of medications." Dr Andy Powell, Physiology Lead for Nursing Birmingham City University "The outlay of the chapters is easily navigated and the level of the knowledge that the book starts at is at a basic level enough for any student nurse from year 1-3 to start with and builds in complexity. They are in lovely bite-size chunks that are easy to read and easily understood. The 10 MCQ's at the end of a chapter are a very useful method of chapter consolidation and the case studies further reinforce learning." Georgina Cox, Senior Lecturer in Adult Health Middlesex University Deborah Robertson is a lecturer in nursing at the University of Salford. She teaches on the pre-registration nursing curriculum as well as being involved in post qualifying and post graduate education. She is also author of Essentials of Medicines Management for Mental Health Nurses. Paul Barber was a Senior Lecturer at the University of Chester. He is co-author of Further Essentials of Pharmacology for Nurses (2012) and contributor and editor of Medicines Management for Nurses: Case Book (2013), all Open University Press. He is now retired.

Effectively learning pharmacology requires students to clearly see the connection between pharmacology, disease and patient care. Pharmacology for Nurses, 3e i(this is the standalone book) is structured to present pharmacology and pathology together, so students can more easily grasp the interrelationship between these subjects and provide a holistic perspective to patient care. A prototype approach, easy to follow presentation and extensive pedagogical aids enable students to understand key concepts and apply essential components of nursing care to drug therapy. If you want the book and access code you need to order: 0131392468 / 9780131392465 Pharmacology for Nurses: A Pathophysiologic Approach and MyNursingLab Student Access Code Card Package Package consists of 0135089816 / 9780135089811 Pharmacology for Nurses: A Pathophysiologic Approach 0135104319 / 9780135104316 MyNursingLab Student Access Code Card Pharmacology for Nurses: A Pathophysiologic Approach

"Amy Karch has found that students learn best when concepts are built upon each other, growing from simple to complex, building on a foundation of understanding. Organized by body systems, this heavily illustrated book organizes essential nursing pharmacology information into focused, easy-to-learn steps. Building key concepts upon each other, the text gives students a solid foundation of understanding. Easy to understand drug prototype boxes are integrated throughout the book as well as integrated content summaries. Contains more images depicting drug actions than any of the book's competitors. Includes the popular and proven "Focus on" theme for drug use across the lifespan, cultural and gender considerations, evidence-based practice, patient teaching, herbal and alternative therapies and dosage calculation; including "Focus on Safe Medication Administration;" and a "Drugs in Focus" table for each classification of drugs. Focused content and focused features equal a focused student. Drug discussions include therapeutic actions and indications, pharmacokinetics, contraindications and cautions and adverse effects. Detailed rationales are presented throughout. Each chapter opens with Learning Objectives and a Glossary of Key Terms, and ends with NCLEX-style questions, and contains a case study-based critical thinking exercise that sets up a situation, shows critical thinking, and then presents a discussion and case-based nursing care guide. Features like this make the book an essential teaching tool!"--Publisher's Website.

Always a student favorite, Pharmacology for Nursing Care offers a clear approach explaining drug prototypes and how they work. It provides the background needed to understand related drugs currently on the market, as well as drugs yet to be released. In simplifying a complex subject, this text focuses on the essentials of pharmacology. Large print is used to show "need-to-know" information, and small print is

used for "nice to know" material. At the end of each chapter, a summary of major nursing implications helps in applying the material to real-world situations. This edition includes a new companion CD-ROM featuring NCLEX® examination-style review questions, a variety of electronic calculators, and animations depicting drug mechanisms and effects. Uses a prototype drug approach that places a strong emphasis on understanding over memorization - equipping students with the knowledge to learn not only about related drugs currently on the market, but also about those drugs that will be released once the student begins practice. Summaries of Major Nursing Implications at the end of each chapter provide an in-depth look at assessment, implementation, and ongoing evaluations. Utilizes large print for essential information and small print for "nice-to-know" information to help both faculty and students focus their limited classroom and study time on understanding the essentials. Concise drug summary tables present detailed information on individual drugs, including class, generic and trade names, dosages, routes, and indications. Key Points at the end of each chapter summarize content in a bulleted format to help students review important concepts. Prototype drug discussions employ a clear and consistent format with separate headings for Mechanism of Action; Pharmacologic Effects; Pharmacokinetics; Therapeutic Uses; Adverse Effects; Drug Interactions; and Preparations, Dosage, and Administration. An attractive full-color design adds visual interest, highlights key information, and facilitates student learning. Drugs for Multiple Sclerosis and Drugs for Hemophilia chapters. Drugs for Erectile Dysfunction and Benign Prostatic Hyperplasia chapter covers newsworthy drugs such as Viagra and Levitra. Special Interest Topics boxes on current issues in pharmacology, such as Medication-Overuse Headache: Too Much of a Good Thing and Face Time with Botox. Adult Immunization appendix summarizes the latest information on immunizations. Numerous new illustrations show drug mechanisms and effects, and depict topics such as histologic changes in Alzheimer's disease and the movement of drugs following GI absorption.

Rev. ed. of: Pharmacology and the nursing process / Linda Lane Lilley ... [et al.]. 6th ed. c2011.

Designed with the student in mind, and easy to read and use, the new 2nd edition of Lilley will cover all the key pharmacology content needed by Canadian nursing students. Known for its appealing layout, plenty of photos, and numerous helpful boxed features, Lilley helps students manage the extremely detailed subject of pharmacology. This edition focuses on the role of nurses and their practices in culturally diverse Canada, and includes new content on natural health products and ethnocultural considerations. Evidence-Informed Practice Boxes: Provide a bridge between research evidence and its relevance to nursing practice Laboratory Values Related to Drug Therapy: Provide normal ranges and values for specific lab tests, and rationales for lab assessments in relation to specific drug therapy UNIQUE! In My Family Boxes: Written by nursing students of various ethnocultural backgrounds, relaying their cultural health beliefs and practices and drug use Preventing Medication Errors Boxes: Reinforce concepts introduced in the medication errors chapter and relate them to specific common errors that occur in clinical practice. Special Populations: Women: In addition to other special populations, some boxes specifically focus on women's health UNIQUE! Tear out cards from Mosby's Pharmacology Memory NoteCards Increased pathophysiology coverage: Introduces key chapters to provide students with a brief overview before launching into drug information Chapters on Antibiotics and Antineoplastics: Subjects have both been divided into two chapters each, making difficult material easier to digest for students Generic and trade drug names are used throughout – with a new Drug Index at the back of the book Emphasis on nursing roles and practices in Canada More info on natural health products More info on ethnocultural considerations
