Negative experiences of stigmatization, discrimination, and rejection are common among people living with HIV in the United States,

and particularly when they are also members of a minority group. Some three decades after the first cases of AIDS were identified, people infected with HIV continue to be perceived and characterized negatively. While an HIV/AIDS diagnosis is typically associated with negativity, this study

investigates the extent to which collective experiences among HIV-positive people result in healthy responses and positive social adjustment. This study is focused on the ways in which HIV-positive Puerto Rican men in Boston live positive despite being diagnosed with HIV.

Rather than wrapping themselves in the social stigma of HIV and the isolation that entails, they participate in processes that affirm themselves and their peers. In so doing, they help generate both healthy and meaningful lives for themselves and others. The study examines the process in which

Puerto Rican men living with HIV in Boston participate, promote, and reaffirm an HIV community, la comunidad, as a social entity with a unique culture and identity. This study also investigates how this community influences, supports, and encourages the adoption of positive

transformations for living long term with HIV.[^] On the basis of nine months of field research, this qualitative study employed both focus groups and interviews with fifty HIV-positive Puerto Rican men in Boston. These men were recruited, using convenience sampling, from different community-

together to negotiate and form a unique cultural community expressed in norms, beliefs, and practices that, although centered on HIV, are designed for living healthy. These expressions reaffirm a sense of community in everyday settings and transform the lives of these men with

positive behaviors and healthy lifestyles. The findings reveal that this transformation takes place in the context of a community, with the support, encouragement, and at times, policing of others. La comunidad is where the lives of these men are transformed as they learn, adopt, and

Aids Awareness

Fifteen years ago the AIDS `epidemic' did not exist on the public agenda. In just over a decade the public and official response to the disease has resulted in the development of a whole network of organizations devoted to

the study, containment, and practical treatment of AIDS. In this important and original analysis of AIDS policy, Virginia Berridge examines the speed and nature of the official (and unofficial) response to this new and critical historical event. The policy reaction in Britain passed through

three stages. From 1981-1986 the outbreak of a new contagious disease led to public alarm and social stigmatization, with a lack of scientific certainty about the nature of the disorder. AIDS was a new and open policy area - there were no established departmental, local, or health authority

mechanisms for dealing with the problem. This was a period of policy development from below, with relatively little official action and many voluntary initiatives behind the scenes. This phase was succeeded in 1986-1987 by a brief stage of quasi-wartime emergency, in which national

politicians and senior civil servants intervened, and a high-level political response emerged. The response was a liberal one of 'safe sex' and harm minimization rather than draconian notification or isolation of carriers. The author demonstrates that despite the 'Thatcher revolution' in government in

the 1980s, crisis could still stimulate a consensual response. The current period of 'normalization' of the disease sees panic levels subsiding as the rate of growth slows and the fear of the unknown recedes. Official institutions have been established and formal procedures adopted and reviewed;

paid professionals have replaced the earlier volunteers. The 1990s have seen change in the liberal consensus towards a harsher response and the partial repoliticization of AIDS. In this fascinating and scholarly account, Virginia Berridge analyses a remarkable period in contemporary

Gabriele Griffin argues that the explosion of HIV/AIDS into highly
