system engineering has motivated the development of many new concepts and has simplified the design of many modern industrial systems. During the first decade of their life. microprocessors have shown a tremendous evolution in all possible directions (technology. power. functionality. I/O handling. etc). Of course putting the microprocessors and their environmental devices into properly operating systems is a complex and difficult task requiring high skills for melding and integrating hardware. and systemic components. software This book was motivated by the editors' feeling that a cohesive reference is needed providing a good coverage of modern

industrial applications of microprocessor-based real time control, together with latest advanced methodological issues. Unavoidably a single volume cannot be exhaustive. but the present book contains a sufficient number of important real-time applications. The book is divided in two sections. Section I deals with general hardware. software and systemic topics. and involves six chapters. Chapter 1. by Gupta and Toong. presents an overview of the development of microprocessors during their first twelve years of existence. Chapter 2. by Dasgupta. deals with a number of system software concepts for real time microprocessor-based systems (task scheduling. memory

In this new installation of his work, William E. Connolly examines entanglements between volatile earth processes and emerging cultural practices, highlighting relays among extractive capitalism, self-amplifying climate processes, migrations, democratic aspirations, and fascist dangers. In three interwoven essays, Connolly takes up thinkers in the "minor tradition" of European thought who, unlike Cartesians and Kantians, cross divisions between nature and culture. He first offers readings of Sophocles and Mary Shelley, asking whether

close attention to the Anthropocene could perhaps have arrived earlier had subsequent humanists absorbed their lessons. He then joins Deleuze and Guattari's notion of an abstract machine with contemporary earth sciences, doing so to compare the Antique Little Ice Age of the late Roman empire to contemporary relays between extractive capitalism and accelerating climate processes. The final essay stages a dramatic dialogue between Alfred North Whitehead and Michel Foucault about the pursuit of truth during a time of planetary turbulence. With *Climate Machines Fascist Drives, and Truth*, Connolly forges incisive interventions into key issues of our time.
