Cell Wall – The outer layer in the plant cell is called cell wall. The cell wall lies outside the

cell structure. The cell wall is made up of cellulose, hemicellulose, and pectin. The cell wall is

strong and rigid. It provides structural support and protection to the cell. The cell wall is

found in plants, fungi, and some bacteria. The cell wall is not found in animal cells. The cell wall is

the main part of the human eye are the cornea, iris, pupil, aqueous

humor, and lens. The cornea is the outermost part of the eye. The iris is the colored part of the eye. The pupil is the opening in the center of the iris. The aqueous humor is the fluid that fills the space between the cornea and the lens. The lens is a biconvex structure that focuses light on the retina.
