The Human Web is an excellent summary of human history. It is indeed a bird's eye view in that it looks at the broad overall sweep of human affairs and doesn't bog down in unnecessary detail. The major theme is the construction and expansion of human webs, or interconnections that tie cultures and civilizations together ever more tightly.

This book invites readers to enter a two-floor virtual "gallery " where 60-plus images of birds reflecting the accomplishments of human pictorial history are on display. These are works in a genre the authors term Science Art--that is, art that says something about the natural world and how it works. Darryl Wheye and Donald Kennedy show how these works of art can advance our understanding of the ways nature has been perceived over time, its current vulnerability, and our responsibility to preserve its wealth. Each room in the gallery is dedicated to a single topic. The rooms on the first floor show birds as icons, birds as resources, birds as teaching tools, and more. On the second floor, the images and their captions clarify what Science Art is and how the intertwining of art and science can change the way we look at each. The authors also provide a timeline linking scientific innovations with the production of images of birds, and they offer a checklist of steps to promote the creation and accessibility of Science Art. Readers who tour this unique and fascinating gallery will never look at art depicting nature in the same way again. Published with assistance from the Alfred P. Sloan Foundation's Public Understanding of Science and Technology Program.

A leader in the field presents a cohesive narrative of world history that effectively addresses the main challenge of the introductory survey: how to navigate beginning students through the vast detail of the subject. McNeill uses connective websAlong which trade, religious beliefs, technologies, pathogens, and much else traveledNo organize details and keep the big picture in view. Students emerge with clear takeaways and a strong sense of the basic dynamics of world history. Together with digital resources that amplify the webs approach and highlight diverse types of evidence, John McNeillOs The Webs of Humankind offers a clear and effective teaching tool for the world history survey course.

An award-winning science writer tours the globe to reveal what makes birds capable of such extraordinary feats of mental prowess Birds are astonishingly intelligent creatures. According to revolutionary new research, some birds rival primates and even humans in their remarkable forms of intelligence. In The Genius of Birds, acclaimed author Jennifer Ackerman explores their newly discovered brilliance and how it came about. As she travels around the world to the most cutting-edge frontiers of research, Ackerman not only tells the story of the recently uncovered genius of birds but also delves deeply into the latest findings about the bird brain itself that are shifting our view of what it means to be intelligent. At once personal yet scientific, richly informative and beautifully written, The Genius of Birds celebrates the triumphs of these surprising and fiercely intelligent creatures. Ackerman is also the author of Birds by the Shore: Observing the Natural Life of the Atlantic Coast.

"This book shows us the face of Earth ' s sixth great mass extinction, revealing that this century is a time of darkness for the world ' s birds and mammals. In The Annihilation of Nature, three of today ' s most distinguished conservationists tell the stories of the birds and mammals we have lost and those that are now on the road to extinction. These tragic tales, coupled with eighty-three color photographs from the world ' s leading nature photographers, display the beauty and biodiversity that humans are squandering."--Book jacket.

There are 10,500 species of bird worldwide and wherever they occur people marvel at their glorious colours and their beautiful songs. We also trap and consume birds of every kind. Yet birds have not just been good to eat. Their feathers, which keep us warm or adorn our costumes, give birds unique mastery over the heavens. Throughout history their flight has inspired the human imagination so that birds are embedded in our religions, folklore, music and arts. Vast in both scope and scale, Birds and People explores and celebrates this relationship and draws upon Mark Cocker ' s 40 years of observing and thinking about birds. Part natural history and part cultural study, it describes and maps the entire spectrum of our engagements with birds, drawing in themes of history, literature, art, cuisine, language, lore, politics and the environment. In the end, this is a book as much about us as it is about birds. Birds and People has been stunningly illustrated by one of Europe ' s best wildlife photographers, David Tipling, who has travelled in 39 countries on seven continents to produce a breathtaking and unique collection of photographs. The book is as important for its visual riches as it is for its groundbreaking content. Birds and People is also exceptional in that the author has solicited contributions from people worldwide. Personal anecdotes and stories have come from more than 650 individuals in 81 different countries. They range from university academics to Mongolian eagle hunters, and from Amerindian shamans to some of the most celebrated writers of our age. The sheer multitude of voices in this global chorus means that Birds and People is both a source book on why we cherish birds and a powerful testament to their importance for all humanity.

Have you ever given consideration to what it would be like to be deaf? Not hearing a single sound. Sure, it's quiet in your house, but you still hear sounds. I would like to think the sensation would be equitable to being underwater, but that would not be a true statement. You can still hear things while being underwater: Waves swishing and people talking above the water - yelling or laughing. Deafness is pure silence. When something big drops to the floor, I "feel" the thump it made. When my dogs bark, I can't hear them, but if they jump on my bed while I'm sleeping, I can feel they are present to wake me for a incoming visitor, burglar, tornado or other natural disaster. This book is a candid, and comical view about hearing loss, Meniere's Disease, vertigo, and the process of undergoing cochlear implant surgery. It also goes into depression and coping mechanisms for all of the above. It is a MUST read for someone or anyone you know (possibly yourself, but you won't admit it), who may be suffering from hearing loss. Progressive hearing loss is subtle. The sounds we often take for granted you no longer hear. Pay attention to your surroundings next time you are outside. Can you still hear the birds?

" Intriguing stories from the history of the human relationship with birds, including their symbolism in art, literature, religion, and folklore " (Booklist). Even the most well-informed wildlife enthusiast will be entertained by the stories and fascinating facts in this beautifully illustrated book. Our ancestors hunted, tamed, worshipped, and depicted birds, and even bestowed magical properties upon them. Why did ancient writers consider the sparrow a lustful creature? Which bird was killed and hung up to predict the weather? And what was an " arse-foot? " Wildlife photographer and history journalist Simon Wills explores the intriguing and at times bizarre stories behind our relationship with birds. Find out why robins feature on Christmas cards, and how Mozart was persuaded to keep a pet starling. What bird did Florence Nightingale carry around in her pocket? How did the blue tit get its name? Whole careers have been created around birds—from falconers to ostrich farmers—and birds have had great symbolic importance too. Discover, for example, why Raleigh bicycles carry a heron logo and why church lecterns are in the shape of an eagle. If you enjoy wildlife, then this book is full of surprises. Pigeons were trained to carry messages in wartime, but could gulls be taught to hunt U-boats? And which American president ' s parrot started swearing at his funeral? " A pleasing and often illuminating book with many examples of historical connections with birds, from Queen Victoria ' s parrots and the Prince of Wales ' s feathers to Kellogg ' s cockerel and recipes for flamingos.
