Wilfred Owen | The Next War | Genius
The Next War Poem by Wilfred Owen. Autoplay next video. War’s a joke for me and you,
Wile we know such dreams are true.
- Siegfried Sassoon
Out there, we’ve walked quite friendly up to Death,
Sat down and eaten with him, cool and bland-
Pardoned his spilling mess-tins in our hand.

The Next War Poem by Wilfred Owen - Poem Hunter
[The Next War] is a relatively little-known Wilfred Owen poem; compared with his great sonnet | Anthem for Doomed Youth |, this sonnet is practically invisible to all but the most diehard fans of Wilfred Owen or war poetry. Yet this poem offers an interesting insight into Owen’s work.

The U.S. Needs An Endgame Before It Plunges Into the Next ...
“The Next War” is a sonnet written in 1917 by British poet and World War I soldier Wilfred Owen, while he was being treated for shell shock (now referred to as posttraumatic stress disorder, or PTSD) at Craiglockhart Hospital. In the poem, Owen conveys the psychological horrors of war as well as his cynicism about its aims and effectiveness.

The Next War Americans are fooling themselves if they think the era of adventures abroad is over. In fact, another big international intervention is just around the corner.

The Next War | Foreign Policy
Buy The Next American Civil War by Harris, Lee (ISBN: 9780230114234) from Amazon's Book Store. Everyday low prices and free delivery on eligible orders.

With the end of the Cold War came not the end of history, but the end of America’s sense of its strategic purpose in the world. Then, after a decade of drift, the US was violently dragged back into international conflict. Its armed forces responded magnificently but its leaders’ objectives were substantially flawed. We fought the wrong war/twice/for reasons that were opaque, and few American citizens understood the cause for which their sons and daughters were fighting and dying. War is a poor substitute for strategic vision, and decisions made in the heat of imminent conflict are often limited by the emotions of the moment. In Don’t Wait for the Next War, Wesley K. Clark, a retired four-star general of the US army and former Democratic candidate for president, presents a compelling argument for continued American global leadership and the basis on which it can succeed/a new American strategy. America needs both new power and deeper perspective. The platform for American leadership is to use America’s energy resources to spark sustainable economic growth, building new strength to deal with pressing domestic issues like the deficit as well as the longer term challenges to US security/terrorism, cyber threats, the next financial crisis, China’s rising power, and climate change. Such a strategy is not only achievable but essential, and it is urgently needed. This is the true test of American leadership for the next two decades, but it must start now, so America has the power and vision to deal with the acute crises that will inevitably come!n the Mideast, Europe, or Asia.

How and when do military innovations take place? Do they proceed differently during times of peace and times of war? In Winning the Next War, Stephen Peter Rosen argues that armies and navies are not forever doomed to “fight the last war.” Rather, they are able to respond to shifts in the international strategic situation. He also discusses the changing relationship between the civilian innovator and the military bureaucrat. In peacetime, Rosen finds, innovation has been the product of analysis and the politics of military promotion, in a process that has slowly but successfully built military capabilities critical to American military success. In wartime, by contrast, innovation has been constrained by the fog of war and the urgency of combat needs. Rosen draws his principal evidence from U.S. military policy between 1905 and 1960, though he also discusses the British army’s experience with the battle tank during World War I.

In the early twentieth century, the new technology of flight changed warfare irrevocably, not only on the battlefield, but also on the home front. As prophesied before 1914, Britain in the First World War was effectively no longer an island, with its cities attacked by Zeppelin airships and Gotha bombers in one of the first strategic bombing campaigns. Drawing on prewar ideas about the fragility of modern industrial civilization, some writers now began to argue that the main strategic risk to Britain was not invasion or blockade, but the possibility of a sudden and intense aerial bombardment of London and other cities, which would cause tremendous destruction and massive casualties. The nation would be shattered in a matter of days or weeks, before it could fully mobilize for war. Defeat, decline, and perhaps even extinction, would follow. This theory of the knock-out blow from the air solidified into a consensus during the 1920s and by the 1930s had largely become an orthodoxy, accepted by pacifists and militarists alike. But the devastation feared in 1938 during the Munich Crisis, when gas masks were distributed and hundreds of thousands fled London, was far in excess of the damage wrought by the Luftwaffe during the Blitz in 1940 and 1941, as terrible as that was. The knock-out blow, then, was a myth. But it was a myth with consequences. For the first time, The Next War in the Air reconstructs the concept of the knock-out blow as it was articulated in the public sphere, the reasons why it came to be so widely accepted by both experts and non-experts, and the way it shaped the responses of the British public to some of the great issues facing them in the 1930s, from pacifism to fascism. Drawing on both archival documents and fictional and non-fictional publications from the period between 1908, when aviation was first perceived as a threat to British security, and 1941, when the Blitz ended, and it became clear that no knock-out blow was coming, The Next War in the Air provides a fascinating insight into the origins and evolution of this important cultural and intellectual phenomenon, Britain’s fear of the bomber.

Brilliant and bellicose book on the divine nature of warfare and the proper place of Germany in the modern world by a leading Prussian militarist. Bernhardt viewed war as "a biological necessity" based upon "the natural law ... the law of the struggle for existence." Originally published in 1911, the book influenced German military thinking in both World War I and World War II.

Based on an insider’s knowledge of weaponry and of actual Israeli and Egyptian battle strategies, this book examines how two of the strongest regional militaries would likely fight a high intensity war in the Middle East. The book examines how the various factors in play - the battle for air superiority, air-ground bombardment, armor, and infantry collisions - would shape the outcome of the conflict, discussing each factor separately in order to highlight its importance. The analysis draws on previous (mainly Arab-Israeli) conflicts, and also on the author’s 20 years of experience in studying and doing research on Israel’s national strategy and military doctrine. Fascinating new issues are looked at, such as the demilitarization of the Sinai Peninsula and both armies being largely equipped with US military hardware. How would the lack of military infrastructure in the Peninsula dictate the course of the conflict? What issues of identification and friendly fire would the similarity of equipment bring? The book also examines the variety of confrontations that Israel might face - such as high intensity, hybrid, and low intensity wars - and the corresponding responses and strategies it might choose in defense. This will be essential reading for anyone interested in modern high intensity warfare, the Arab-Israeli conflict, and the possible future of the Middle East. *** Eilam presents a very cogent, judicious and compelling analysis of what the future military confrontation between Israel and Egypt in Sinai could look like. -- Hillel Frisch, Professor of Political and Middle East Studies, Bar-Ilan U. [Subject: Middle East Studies, Military Studies, Politics]

This book offers a major new analysis of how peace and security can be maintained in Europe and provides a radical vision of a technology-enabling future European defence. It weaves history, strategy, policy, and technology into a compelling analytical narrative and lays out the scale of the challenge Europeans and their allies face.

From two former military officers and award-winning authors, a chillingly authentic geopolitical thriller that imagines a naval clash between the US and China in the South China Sea in 2034—and the path from there to a nightmarish global conflagration.On March 12, 2034, US Navy Commodore Sarah Hunt is on the bridge of her flagship, the guided missile destroyer USS John Paul Jones, conducting a routine freedom of navigation patrol in the South China Sea when her ship detects an unflagged trawler in clear distress, smoke billowing from its bridge. On that same day, US Marine aviator Major Chris "Wedge" Mitchell is flying an F35E Lightning over the Strait of Hormuz, testing a new stealth technology as he flirts with Iranian airspace. By the end of that day, Wedge will be an Iranian prisoner, and Sarah Hunt’s destroyer will lie at the bottom of the sea, sunk by the Chinese Navy. Iran and China have clearly coordinated their moves, which involve the use of powerful new forms of cyber weaponry that render US ships and planes defenseless. In a single day, America’s faith in its military’s strategic pre-eminence is in tatters. A new, terrifying era is at hand.So begins a disturbingly plausible work of speculative fiction, co-authored by an award-winning novelist and decorated Marine veteran and the former commander of NATO, a legendary admiral who has spent much of his career strategically outmaneuvering America’s most tenacious adversaries. Written with a powerful blend of geopolitical sophistication and human empathy, 2034 takes us inside the minds of a global cast of characters—Americans, Chinese, Iranians, Russians, Indians—as a series of arrogant miscalculations on all sides leads the world into an intensifying international storm. In the end, China and the United States will have paid a staggering cost, one that forever alters the global balance of power.Everything in 2034 is an imaginative extrapolation from present-day facts on the ground combined with the authors’ years working at the highest and most classified levels of national security. Sometimes it takes a brilliant work of fiction to illuminate the most dire of warnings: 2034 is all too close at hand, and this cautionary tale presents the reader a dark yet possible future that we must do all we can to avoid.

You can read The Next War as a military novel and find it riveting

An urgent, prescient, and expert look at how future technology will change virtually every aspect of war as we know it and how we can respond to the serious national security challenges ahead. Future war is almost here: battles fought in cyberspace; biologically enhanced soldiers; autonomous systems that can process information and strike violently before a human being can blink. A leading expert on the place of technology in war and intelligence, Robert H. Latiff, now teaching at the University of Notre Dame, has spent a career in the military researching and developing new combat technologies, observing the cost of our unquestioning embrace of innovation. At its best, advanced technology acts faster than ever to save the lives of soldiers; at its worst, the deployment of insufficiently considered new technology can have devastating unintended or long-term consequences. The question of whether we can is followed, all too infrequently, by the question of whether we should. In Future War, Latiff maps out the changing ways of war and the weapons technologies we will use to fight them, seeking to describe the ramifications of those changes and what it will mean in the future to be a soldier. He also recognizes that the fortunes of a nation are inextricably linked with its national defense, and how its citizens understand the importance of when, how, and according to what rules we fight. What will war mean to the average American? Are our leaders sufficiently sensitized to the implications of the new ways of fighting? How are the attitudes of individuals and civilian institutions shaped by the wars we fight and the means we use to fight them? And, of key importance: How will soldiers themselves think about war and their roles within it? The evolving, complex world of conflict and technology demands that we pay more attention to the issues that will confront us, before it is too late to control them. Decrying what he describes as a “broken” relationship between the military and the public it serves, Latiff issues a bold wake-up call to military planners and weapons technologists, decision makers, and the nation as a whole as we prepare for a very different future.

Violence begets violence | He believes the majority of people around the world who have stood up in protest against war. Stop the Next War Now is a reflective look and call to action to end violence, by acclaimed peace activists, experts, and visionaries, including Eve Ensler, Barbara Lee, Arianna Huffington, Janeane Garafalo, Nancy Pelosi, Maxine Hong Kingston, and many more. The book shares expert insight on the issues and powers-that-be that encourage war, including the media, politicians, global militarization, and the pending scarcity of natural resources. A powerful, smart, and passionate work, this book aims to educate and reflect on the effectiveness of peace movement activities and offer hope | through shared ideas, action steps, and checklists | to transform a culture of violence to a culture of peace. How can people humanize each other, ask the authors, and act as responsible global citizens? With vitality, joy, and a dash of CODEPINK-style humor, Stop the Next War Now insists that the time is ripe for the first-ever global movement to put an end to war | and tells readers what they can do about it.
