Case Studies in Abnormal Psychology presents a broad range of cases drawn from the clinical experience of authors Kenneth N. Levy, Kristen M. Kelly, and William J. Ray to take readers beyond theory into real-life situations. The authors take a holistic approach by including multiple perspectives and considerations, apart from those of just the patient. Each chapter follows a consistent format: Presenting Problems and Client Description; Diagnosis and Case Formulation; Course of Treatment; Outcome and Prognosis/Treatment Follow-up; and Discussion Questions. Providing empirically supported treatments and long-term follow-up in many case studies gives students a deeper understanding of each psychopathology and the effects of treatment over time.

Consistent with previous editions, several themes run throughout the book: Developmental psychopathology: Children's and adolescents' behaviors are on a continuum (from very adaptive to very maladaptive), with only the very severe ends of the spectrum being conceptualized as disorders. Diversity, inclusion, and understanding: Special attention is given to issues of race/ethnicity, gender, family constellation, religious orientation, primary language, socioeconomic status, and physical differences to help students see the commonalities and differences of abnormal child behavior within a cross-cultural and international context. New to the 4th edition Completely revised in both structure and content to reflect the DSM-5 Increase coverage of risk factors related to long-term effects of sexual abuse and bullying.
