Laboratory testing can be performed on many types of fluids from the body other than blood. Often, these fluids are tested instead of blood because they can give more direct answers to what may be going on in a particular part of the body. Some body fluids that may be tested include: Urinalysis; Semen Analysis; Sweat Chloride; Fetal Fibronectin (fFN) Amniotic Fluid Analysis; CSF Analysis; Synovial Fluid Analysis; Pleural Fluid Analysis; Pericardial Fluid Analysis; Peritoneal Fluid Analysis
