Just as the Beetle started a long tradition of Volkswagen automotive excellence, these are the manuals that created the Bentley reputation for clarity, thoroughness, and indispensability. Our air-cooled Volkswagen manuals provide both do-it-yourself owners and professional mechanics with clear explanations and illustrations, detailed service steps, and time-saving troubleshooting tips.

Just as the Beetle started a long tradition of Volkswagen automotive excellence, these are the manuals that created the Bentley reputation for clarity, thoroughness, and indispensability. Our air-cooled Volkswagen manuals provide both do-it-yourself owners and professional mechanics with clear explanations and illustrations, detailed service steps, and time-saving troubleshooting tips. In the same tradition as our classic 1961-1965 Type 1 manual, this manual offers owners of 1960s vintage Transporters the long out-of-print factory repair information. Indispensable to anyone interested in the history or restoration of the Transporter, this book includes complete coverage of 1200 and 1500 engines, dual-circuit brakes, and body dimension specifications for all models, including those with a sliding sunroof. All factory updates are listed by chassis number and date introduced. This is the one book no serious Type 2 enthusiast should be without.

Here, Volkswagen enthusiast and prolific author Richard Copping examines, for the first time, the complete story of the T4 from the Transporter concept originated forty years before its presence at VW's Hanover factory, through its development period and full production life. Topics covered include: the background story 1949-1990; design concept to production in the 1980s; full analysis of the T4's specifications; face-lifted Caravelles and Multivans from 1996 onwards; petrol- and diesel-aspirated engines including the VR6, V6 and 2.5 litre TDI; the T4 story in the USA - the Euro Van and finally camping conversions. The complete story of the Volkswagen T4, produced between 1990 and 2003 and the first book in the English language to have been written, illustrated and published solely about the T4, beautifully illustrated with 300 colour photographs - a sparkling mixture of archive and modern-day imagery.

This book has proved its worth over the years as a text for courses in Production Management at the Faculty of Automotive Engineering in Turin, Italy, but deserves a wider audience as it presents a compendium of basics on Industrial Management, since it covers all major topics required. It treats all subjects from product development and "make or buy"-decision strategies to the manufacturing systems setting and management through analysis of the main resources needed in production and finally exploring the supply chain management and the procurement techniques. The very last chapter recapitulates the previous ones by analysing key management indicators to pursue the value creation that is the real purpose of every industrial enterprise. As an appendix, a specific chapter is dedicated to the basics of production management where all main relevant definitions, techniques and criteria are treated, including some numerical examples, in order to provide an adequate foundation for understanding the other chapters. This book will be of use not only to Automotive Engineering students but a wide range of readers who wish to gain insight in the world of automotive engineering and the automotive industry in general.

Step-by-step procedures and accurate specifications enable VW owners with mechanical skills to diagnose and correct maintenance problems efficiently and thoroughly
